PROFESSIONAL EXPERIENCE

AI Plans | *Product Designer + Engineer*

May 2025 – July 2026

- Built the **course platform end-to-end**, supporting standalone and cohort-based courses serving **40+ students**, with Stripe payments and an admin CMS for curriculum, pricing, prerequisites, instructors, and cohort schedules.
- Improved the learning experience by reducing **individual lesson load times by up to 99.98%** through selective data fetching, lazy loading, shimmer loading states, and Cloudinary-backed media delivery; enabled returning students to reach their lesson from the homepage in **5s**.
- Built a custom **cohort instructor call-booking system** using Bun.js and Google Calendar APIs, enforcing **4 calls/month and 1 call/week** to automate scheduling while preserving program-level booking constraints.
- Designed and engineered the **Moonshot Alignment Program** landing page, generating **290+ applications**, including **100+ PhD researchers** and senior engineers from **Meta, AWS, AMD, and Microsoft**.
- Built an in-house **event platform** supporting complex events with multiple ticket types, ticket-specific questions, custom information tabs, project submissions, and **regional admin controls for country-wide events**; one event attracted **[500+]** attendees worldwide and generated **€1K+** in ticket revenue.
- Led the **complete site redesign and design system**, establishing reusable design tokens, typography, accessibility patterns, custom themes, illustrations, and event branding across courses, research, and events.
- **Tech Stack:** Vue.js, JavaScript, Express.js, Bun.js, PocketBase, TailwindCSS, Stripe.js, Google Calendar API, Cloudinary, Marked.js, Highlight.js

PROJECTS

Send a Letter ✉ | *React.js, Fabric.js, TailwindCSS, Framer*

- Designed and developed an interactive web app for creating **personalized digital letters**, combining a visual editor with a streamlined user flow from creation to sharing.
- Implemented **Cloudinary image optimization** with transformed delivery URLs to reduce asset size and improve page performance.
- Designed the end-to-end **user experience and interaction flow**, minimizing friction between landing on the app and creating a letter.
- Built **secure shareable links** for private letter delivery without requiring recipients to create accounts.

thRadar – Threat Intelligence Platform ✉ | *React.js, Node.js, Express.js, MongoDB, Python*

- Built a **full-stack threat intelligence platform** integrating IP intelligence, phishing URL detection, password breach analysis, and a live global threat map into a single interface.
- Automated ingestion and enrichment of **10,000+ malicious IPs daily** using AbuseIPDB and IP2Location, with Python scripts, cron jobs, and GitHub Actions maintaining fresh threat intelligence data.
- Developed an interactive **3D threat visualization** using Three.js and three-globe to map **10,000+ malicious IPs** and visualize the **top 100 weekly Layer 7 attacks** from Cloudflare Radar.
- Designed **REST APIs, MongoDB schemas, database indexes, and cloud deployments** across Vercel and Railway, with automated pipelines and modular frontend/backend architecture.

SKILLS

Frontend: React.js, Vue.js, JavaScript, TypeScript, TailwindCSS

Backend: Node.js, Bun.js, Express.js

Database: MongoDB, SQL, PostgreSQL, PocketBase

APIs & Services: REST APIs, Stripe, Google Calendar API, Cloudinary

Version Control: Git, GitHub

Design Tools: Figma, Framer, Affinity, Canva

EDUCATION

Bachelor of Science in Computer Science

Patkar Varde College, University of Mumbai

April 2026

CGPA: 8.89/10.0

ICCSAS '25 – International Conference on Computing, STEM and Applied Sciences

March 2025

- Won the ***Best Paper Presenter*** award (Track 06: Technology) for the research paper titled “*Quantum Cryptography Algorithms Assessment: A Comprehensive Study Using IBM’s Qiskit Framework*”.
